54 12 004 ADJUSTING STEEL SLIDING ROOF

Description of Function

Steel sliding roof has two functions.
a) as sliding roof b) as lifting roof

A switch for this purpose is located on right-hand side of winder. Switching is only possible when lid is wound shut.

Open steel sliding roof lid by about 5 cm (2"). Press off and slide back front headliner frame. Shut steel sliding roof lid.

Front Height Adjustment

Ideal adjustment is when lid is about 1 mm (0.040") deeper than outer roof panel surface.

Loosen screws (1) and make correction with height adjusting screw (2).

Tighten screws (1) again.

Ideal adjustment is when lid is about 1 mm (0.040") higher than outer roof panel surface.

Loosen screws on gate holder.

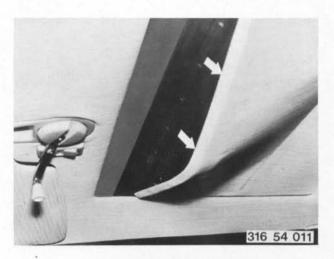

Now adjust lid in slots.

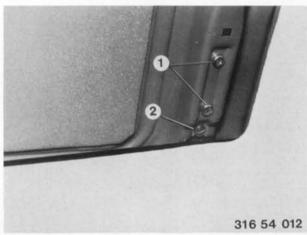

Tighten screws again.

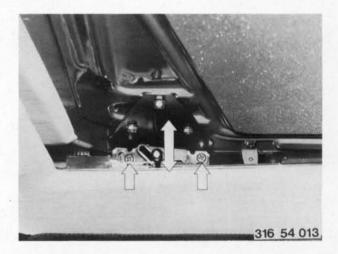

If this correction is not sufficient, place shims between lid and holder.

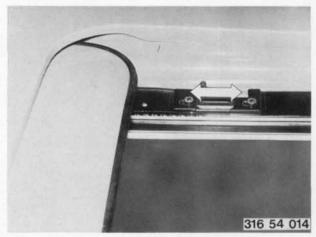

Lifting Position

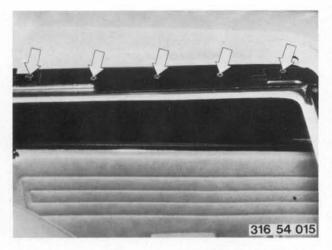

When in lifting position the steel sliding roof lid must be against the front edge of roof opening. Correct adjustment by moving guide pins.

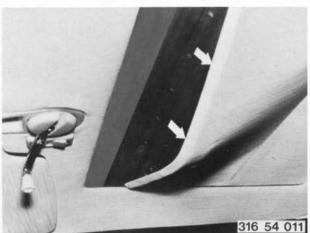

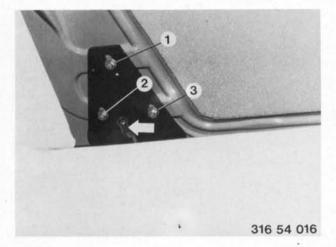

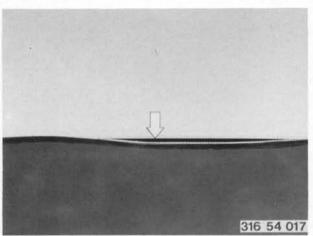

54 12 100 REMOVING AND INSTALLING STEEL SLIDING ROOF

Open sliding roof lid all the way. Remove upper left and right guide rails.

Installation Note! Lubricate guide rails with
vaseline.

Shut sliding roof lid leaving a gap of about 5 cm (2").

Press off and slide back front headliner frame. Close sliding roof lid all the way.

Unscrew left and right nuts (1 ... 3).
Remove steel sliding roof lid.

<u>Caution!</u> There could be shims between lid and holder.

Installation Note! Attach rear of sliding roof lid at holder, pulling in holder slightly.
Slide back gate holder by hand and with help of gear.

54 12 120 REPLACING LID SEAL

Remove and install sliding roof lid - 54 12 100. Pull seal off of lid.

Installation Note! Paste seal with white Terokal 2012 adhesive.

54 12 130 REPLACING ENTIRE HEADLINER FRAME

Remove and install sliding roof lid - 54 12 100. Mark location of guide pins with a scribe to facilitate installation and remove.

Tilt gate holder forward and remove headliner frame.

Unrivet rear water drain from headliner frame.

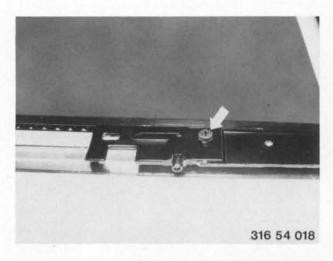

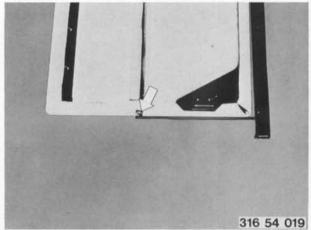

Open steel sliding roof lid. Remove front guide rail. Detach part of headliner.

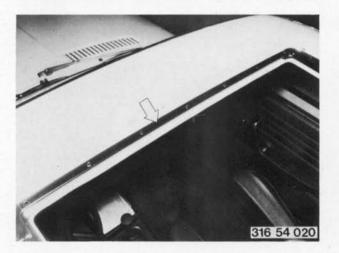

<u>Installation Note!</u> Place Terostat cord underneath guide rail.

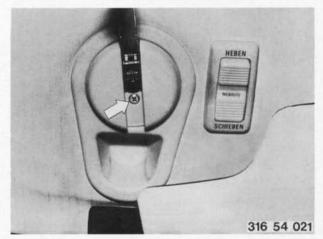

Paste headliner with Terokal 2444.

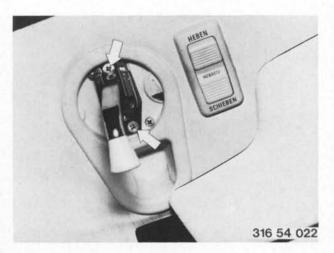

Shut sliding roof lid. Remove cover.

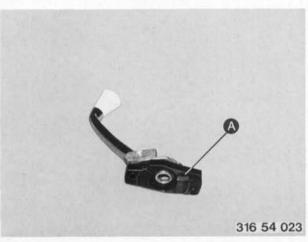

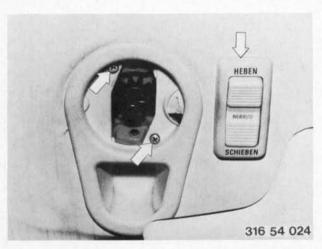

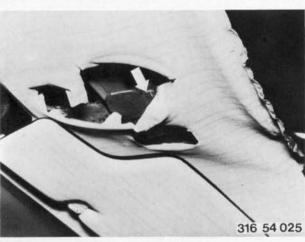

Loosen screws and remove winder.

<u>Installation Note!</u> Opening A of winder holder faces left.

Remove winder escutcheon. Lift out switch escutcheon.

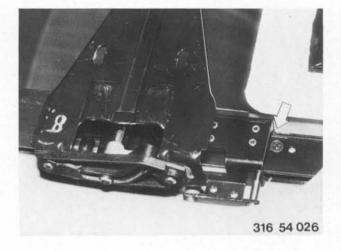

Loosen gear mounting screw and remove gear.

54-12/4

<u>Installation Note!</u> Set gear at off position by turning to the right (catch heard in gear). Switch must be operatable. Steel sliding roof lid must be shut.

Basic Adjustment

Gear in off position and gate holder at mark (rear edge of gate holder must align with mark on guide rails).

TROUBLESHOOTING STEEL SLIDING ROOF

Cause	Correction	
Front seal dry	Lubricate front seal with vaseline	
a) Front slides defective b) Slide screws loose c) Adjustment wrong	a) Replace front slidesb) Tighten screwsc) Adjust sliding roof	
Seal loose at corners	Paste seal at corners with white Terokal 2012	
Pins on gate holder bent	Replace gate holder	
a) Basic adjustment of rear guide (cables) not uniform b) Gear loose	a) Correct basic adjustmentb) Tighten gear	
	Front seal dry a) Front slides defective b) Slide screws loose c) Adjustment wrong Seal loose at corners Pins on gate holder bent a) Basic adjustment of rear guide (cables) not uniform
